Impaktní faktor časopisu je míra frekvence, se kterou se cituje „průměrný článek“ v příslušném roce. Impaktní faktor tak pomáhá odhadnout relativní důležitost časopisu (zejména v porovnání s ostatními časopisy ve stejném oboru). Impaktní faktor se počítá jako poměr počtu běžných citací článků publikovaných během dvou předchozích roků a celkového počtu článků publikovaných ve dvou předchozích rocích.

Cited half-life („citační poločas“) časopisu je počet let od příslušného roku, během nichž se započítává 50 % běžných získaných citací. Tento údaj pomáhá odhadnout délku období většiny citovaných článků publikovaných v příslušném časopise.

Zpracovala HELENA HOLOVSKÁ.
