BUGS and UPDATES for the T_EX Live CD-ROM (version 6)

Installation and setup

On the T_EX Live 6 CD (v. 20010720 and 20010730), the size of the main memory allocated in LaTeX is wrong. To correct it:

- find the location of the main configuration file with command
`kpsewhich texmf.cnf`
- edit the `texmf.cnf` file and replace ‘`main_memory.latex = 11000000`’ with ‘`main_memory.latex = 1100000`’
- recreate LaTeX format: `fmtutil --byfmt=latex`

Systems

Macintosh

People wishing to mount the T_EX Live CD on a Mac OS computer will find that there is a sad lack in that OS in that it supports neither the Joliet nor the Rock Ridge extensions, so you will see only the ISO 9660 file names (8+3 format).

The following link leads to freeware providing a Joliet file system for Mac OS: <http://www.tempel.org/joliet/>

After installing this system extension, you will be able to mount any ISO 9660 CD-ROM with Joliet extensions and see the full file names, access the CD-ROM's web pages with your favorite browser, etc.

Windows 32

The autostart/setup programs on the TeX live CD on Windows 95 only run with Internet Explorer (>= 4.0?) installed. Otherwise the programs complain about WININET.DLL missing. This is missing from the documentation, but there is a redistributable component from Microsoft that will install this dll on systems where it is lacking. Run `setupw32\wintdist.exe`, follow the instructions and then you will be able to autorun the CD.

Fonts

No known problems

Macros

<http://tug.org/texlive/tlprod/Master/texmf/tex/latex/texlive/graphics.cfg> and <http://tug.org/texlive/tlprod/Master/texmf/tex/latex/texlive/color.cfg> files have been updated by Heiko Oberdiek. Grab the files and install them in your $\$TEXMF/tex/latex/texlive/$ directory.
