FOREWORD

This volume contains some of the papers presented at the 10th Winter School on abstract analysis (except for V. Růdl: Note on packing covering and Turán numbers) held from January 24 to February 7, 1982, in hotel "Šumava" in Srní (Bohemia Forest), submitted for publication before July 20, 1982. It is a pity indeed that a number of brilliant lectures, series of lectures and all problems (except for K. Floret: Two questions concerning vector-valued holomorphic functions) are not recorded here.

I owe my thanks to S. Graf, J. de Vries and L. Lovász and A. Recski who presented series of lectures and submitted the corresponding survey papers.

It is a pleasure to acknowledge my indebtedness to the Mathematical Institute of Czechoslovak Academy of Sciences for organizing the winter school, to the Faculty of Mathematics and Physics of the Charles University for the helpful cooperation, and to Circolo Matematico di Palermo for publishing this volume.

I am particularly obliged to the secretaries of the organizing committee, V. Bartík, J. Vilímovský and K. John, and to Benedetto Bongiorno.

Z. Frolik
