Foreword

This volume contains paper presenting some results lectured at the 24th Winter School on Abstract Analysis held January 20–27, 1996, in Benešova Hora and submitted for publication before March 11, 1996.

To speed the publication of the proceedings, the full responsibility for the linguistic form of the papers was left to the authors.

The Winter School lasted only one week and joined together both the traditional parts devoted to analysis and topology. I thank all the participants for creating a very pleasant working and friendly atmosphere. Many interesting and deep results were presented in the main lectures as well as in many short communications.

It is a pleasure to express my gratitude to the Union of Czech Mathematicians and Physicists, in particular to Mrs. Eva Nováková for helping us during the preparations. I appreciate very much the work done by the secretary of the organizing committee Mrs. Anna Kotěšovcová and by our Ph.D. student Miroslav Zelený as well as all my colleagues for doing their best in the organizing committee. We are obliged to the managing editor Petr Simon for preparing this volume of the journal devoted to the Winter School.
