Foreword

All papers but the last one in this volume present some result lectured or obtained at the 35th Winter School on Topology 2007.

The conference was held from January 27 to February 3 in Hejnice, in the building of International Center for Spiritual Rehabilitation, which also partly sponsored the event.

During that time, four series of invited lectures were given. The series delivered by Professor Joerg Brengle from Kobe University, Japan, had title "Iteration along templates". Professor Menachen Kojman from Ben-Gurion University, Israel, spoke on extending Baire measures to Borel measures in ZFC. Professor Marek Balcerzak from Łódź University, Poland, lectured on Marczewski-Burstin representation of algebras of sets. Finally, Professor Oľga Sipacheva from Moscow State University, Russia, gave a series on free topological groups.

I thank all the participants for their contribution that made 35th Winter School a very successful and pleasant event.

To speed up the publication of the proceedings, the full responsibility for the linguistic form of the papers was left to the authors.

I appreciate very much the work done by my colleagues for helping the organising committee. Special thanks are due to Tomáš Pázák for preparing evening culture programs. I feel obliged to the managing editor Petr Simon for preparing this volume of the journal devoted to the Winter School.
