This volume presents mathematical contributions of the Scientific Symposium of the Charles University and the University of Hamburg which was held in Prague from 22 through 24 September 1982. The Symposium took place within the framework of Cultural Days of Federal German Republic in Czechoslovak Socialist Republic. It was opened by Professor Dr. Zdeněk Češka, the Rector of the Charles University and by Dr. Peter Fischer-Appelt, the President of the University of Hamburg. The scientific program was divided into four sections, one of them being the mathematical section devoted to "Asymptotic theory of tests and decisions". The lectures concerned the results in adaptive methods, rank tests, random processes and optimization methods.

The authors of the lectures are grateful to the Editorial Board of Acta Universitatis Carolinae, Mathematica et Physica, for publishing the lectures, which enables the results to be broadly accessible for the scientific audience.
