Table of contents

I FOUNDATIONS OF THE THEORY 1

General properties of ordinary linear homogeneous differential equations of the second order 3

1 Introduction	3
1.1 Preliminaries	3
1.2 The Wronskian determinant	4
1.3 Bases	4
1.4 Integral curves	5
1.5 Kinematic interpretation of integrals	5
1.6 Types of differential equations (q)	5
1.7 The Schwarzian derivative	6
1.8 Projective property of the Schwarzian derivative	7
1.9 Associated differential equations	8

2 Elementary properties of integrals of the differential equation (q)	11
2.1 Relative positions of zeros of an integral and its derivative	11
2.2 Ratios of integrals and their derivatives	11
2.3 The ordering theorems	12
2.4 The (Riemann) integrals $\int_{x_0}^{x_1} \frac{d\sigma}{y^2(\sigma)}$, $\int_{x_0}^{x_1} \frac{q(\sigma)}{y'^2(\sigma)} d\sigma$ in the neighbourhood of a singular point	13
2.5 Application to the associated equation	14
2.6 Basis functions	15
3 Conjugate numbers	17
3.1 The concept of conjugate numbers	17
3.2 Classification of differential equations (q) with respect to conjugate numbers	18
3.3 Properties of differential equations (q) with κ -conjugate numbers	18
3.4 Fundamental numbers	19
3.5 Fundamental integrals and fundamental sequences	19
3.6 General and special equations of finite type	20
3.7 Relations between conjugate numbers of different kinds	21
3.8 Equations with proper fundamental numbers	22
3.9 Singular bases	23
3.10 Differential equations (q) with 1-conjugate numbers	24
3.11 Differential equations (q) with conjugate numbers of all four kinds	25
3.12 Bilinear relations between integrals of the differential equation (q)	26
4 Centro-affine differential geometry of plane curves	28
4.1 Representation of plane curves	28
4.2 Centro-affine representatives of a plane curve and its representations	29
4.3 Centro-affine invariants of plane curves	30
4.4 Regular curves	30
4.5 Centro-affine curvature	31
4.6 Application of the above theory to integral curves of the differential equation (q)	32
Phase theory of ordinary linear homogeneous differential equations of the second order	34
5 Polar coordinates of bases	34
5.1 Introduction	34
5.2 Amplitudes	35
5.3 First phases of a basis	36
5.4 Boundedness of a first phase	37
5.5 Continuity property of a first phase	38
5.6 First phases of the differential equation (q)	39
5.7 Phase functions	39
5.8 Second phases of a basis	39
5.9 Boundedness of a second phase	40

5.10	Continuity property of a second phase	41
5.11	Connection of a second phase with the associated differential equation	41
5.12	Second phases of the differential equation (q)	42
5.13	Integrals of the differential equation (q) and their derivatives expressed in polar coordinates	42
5.14	Ordering relations between first and second phases of the same basis	43
5.15	Some consequences	44
5.16	Explicit connection between first and second phases of the same basis	44
5.17	Phases of different bases of the differential equation (q)	46
5.18	Calculations of the integrals $\int_{x_0}^{x_1} g(\sigma) d\sigma$, $\int_{x_0}^{x_1} h(\sigma) d\sigma$ in the neighbourhood of singular points	47
6	Polar functions	50
6.1	The concept of polar functions	50
6.2	General polar form of the carrier q	53
6.3	Determination of the carrier from a polar function	54
6.4	Radon functions	55
6.5	Normalized polar functions	56
6.6	Normalized polar functions of the first kind	57
6.7	Determination of the carrier from a first normalized polar function	58
6.8	Normalized polar functions of the second kind	59
6.9	Determination of the carrier from a second normalized polar function	60
6.10	Normalized polar functions of the third kind	61
6.11	Determination of the carrier from a third normalized polar function	62
6.12	Some applications of polar functions	62
7	Local and boundary properties of phases	65
7.1	Unique determination of a phase from the Cauchy initial conditions	65
7.2	Boundary values of phases	66
7.3	Normalized boundary values of phases	67
7.4	Singular phases	68
7.5	Properties of singular phases	69
7.6	Boundary values of null phases	70
7.7	Boundary values of other phases	71
7.8	Normal phases	72
7.9	Structure of the set of singular normal phases of a differential equation (q)	72
7.10	Structure of a phase bundle	73
7.11	Structure of a phase bunch	74
7.12	The mapping of ρ into the phase α_ρ	76
7.13	Relations between zeros and boundary values of normal phases	78
7.14	Boundary characteristics of normal phases	79
7.15	Determination of normal phases with given characteristic triple	80
7.16	Determination of the type and kind of the differential equation (q) by means of boundary values of a phase of (q)	82

7.17	Properties of second phases	83
7.18	Relations between the boundary values of a first and second phase of the same basis	84
8	Elementary phases	87
8.1	Introduction	87
8.2	Properties of equations with elementary phases	88
8.3	Properties of integrals, and their derivatives, of differential equations (q) with elementary phases	89
8.4	Determination of all carriers with elementary first phases	91
8.5	Equations with elementary phases, defined over $(-\infty, \infty)$	91
8.6	Power of the set of elementary carriers	92
8.7	Generalization of the concept of elementary phases	92
9	Relations between first phases of two differential equations (q), (Q)	94
9.1	Introduction	94
9.2	Linked phases	94
9.3	Associated numbers	96
9.4	Characteristic triples of two differential equations	98
9.5	Similar phases	99
9.6	Existence of similar phases	100
10	Algebraic structure of the set of phases of oscillatory differential equations (q) in the interval $(-\infty, \infty)$	102
10.1	The phase group \mathfrak{G}	102
10.2	The equivalence relation Q	103
10.3	The fundamental subgroup \mathfrak{E}	104
10.4	The subgroup \mathfrak{S} of elementary phases	104
II	DISPERSION THEORY	107
	Theory of central dispersions	109
11	The transformation problem	109
11.1	Historical background	109
11.2	Formulation of the transformation problem	110
12	Introduction to the theory of central dispersions	112
12.1	Some preliminaries	112
12.2	Definition of the central dispersions	112
12.3	Central dispersions of oscillatory differential equations (q)	113
12.4	Relations between central dispersions	114
12.5	Algebraic structure of the set of central dispersions	116

13 Properties of central dispersions	118
13.1 Monotonicity and continuity	118
13.2 The functional equation of the central dispersions	119
13.3 Derivatives of central dispersions	119
13.4 Higher derivatives	121
13.5 The connection between central dispersions and the transformation problem	122
13.6 Relations between derivatives of the central dispersions and the values of the carrier q	123
13.7 Relations between central dispersions and phases	125
13.8 Representation of central dispersions and their derivatives by means of phases	127
13.9 Structure of the Abel functional equations	127
13.10 Representation of the central dispersions by normalized polar functions	128
13.11 Differential equations of the central dispersions	130
13.12 Solutions of the Abel functional equations with unknown phase functions α, β	131
13.13 Consequences of the above results	133
Special problems of central dispersions	135
14 Extension of solutions of a differential equation (q) and their derivatives	135
14.1 Extension of solutions of the differential equation (q)	135
14.2 Extension of derivatives of solutions of the differential equation (q)	137
15 Differential equations with the same central dispersions of the first kind	138
15.1 Integral strips	138
15.2 Statement of the problem	139
15.3 Properties of the integral strips of the set $(Q\phi)$	139
15.4 A sufficient condition for two differential equations to have the same fundamental dispersion	141
15.5 Ratios of elements of an integral strip	141
15.6 Relations between carriers with the same fundamental dispersion ϕ	143
15.7 Explicit formula for carriers with the same fundamental dispersion ϕ	144
15.8 Explicit formulae for elementary carriers	145
15.9 Relations between first phases of differential equations with the same fundamental dispersion ϕ	147
15.10 Power of the set $Q\phi$	148
16 Differential equations with coincident central dispersions of the κ-th and $(\kappa + 1)$-th kinds ($\kappa = 1, 3$)	149
I. Theory of F -carriers	149
16.1 Characteristic properties	149
16.2 Domain of definition of F -carriers	150
16.3 Elementary carriers	151
16.4 Kinematic properties of F -carriers	151

II. Theory of R -carriers	152
16.5 Characteristic properties of R -carriers	152
16.6 Further properties of R -carriers	153
16.7 Connection between R -carriers and Radon curves	154
16.8 Connection between R - and F -carriers	155
16.9 Kinematic properties of R -carriers	156
17 Bunch curves and Radon curves	157
17.1 Fundamental concepts	157
17.2 Determination of the carriers of the bunch curves	158
17.3 Centro-affine length of arcs of bunch curves	159
17.4 Finite equations of bunch curves	160
17.5 Radon curves	162
Theory of general dispersions	164
18 Introduction	164
18.1 Dispersions of the κ -th kind; $\kappa = 1, 2, 3, 4$	164
18.2 General dispersions	164
19 Linear mapping of the integral spaces of the differential equations (q), (Q) on each other	166
19.1 Fundamental concepts	166
19.2 Composition of mappings	167
19.3 Mapping of an integral space into itself	167
19.4 Determination of the linear mappings from the first phases	168
19.5 Phase bases of composed mappings	169
19.6 Determination of a mapping from arbitrary phases	169
19.7 Normalized linear mappings	170
19.8 Canonical phase bases	171
20 General dispersions of the differential equations (q), (Q)	173
20.1 Fundamental numbers and fundamental intervals of the differential equation (q)	173
20.2 The concept of general dispersion	173
20.3 Properties of general dispersions	174
20.4 Determining elements of general dispersions	177
20.5 Integration of the differential equation (Qq)	179
20.6 Connection between general dispersions and the transformation problem	180
20.7 Embedding of the general dispersions in the phase group	181
21 Dispersions of the κ-th kind; $\kappa = 1, 2, 3, 4$	183
21.1 Introduction	183
21.2 Determination of dispersions of the κ -th kind, $\kappa = 1, 2, 3, 4$	184
21.3 Determination of the central dispersions of the κ -th kind; $\kappa = 1, 2, 3, 4$	184
21.4 The group of dispersions of the first kind of the differential equation (q)	186

21.5	Group property of dispersions of the first kind	187
21.6	Representation of the dispersion group	189
21.7	The group of dispersions of the second kind of the differential equation (q)	192
21.8	The semigroupoid of general dispersions of the differential equations (q), (Q)	192
III GENERAL TRANSFORMATION THEORY		195
General transformations		197
22	Establishment of the special form of the transformation formula	197
22.1	A theorem on transformations of second order differential equations	197
22.2	Introduction of the differential equation (Qq)	199
23	Transformation properties of solutions of the differential equation (Qq)	201
23.1	Relations between solutions of the differential equations (Qq), (qQ), (qq), (QQ)	201
23.2	Reciprocal transformations of integrals of the differential equations (q), (Q)	202
23.3	Transformations of the derivatives of integrals of the differential equations (q), (Q)	205
23.4	Relations between solutions of the differential equation (Qq) and first phases of the differential equations (q), (Q)	206
23.5	Reciprocal transformations of first and second phases of the differential equations (q), (Q)	207
24	Existence and uniqueness problems for solutions of the differential equation (Qq)	209
24.1	The existence and uniqueness theorem for solutions of the differential equation (Qq)	209
24.2	Transformations of given integrals of the differential equations (q), (Q) into each other	209
25	Physical application of general transformation theory	213
25.1	Straight line motion in physical space	213
25.2	Harmonic motion	214
Complete transformations		216
26	Existence and generality of complete transformations	216
26.1	Formulation of the problem	216
26.2	Preliminary	217
26.3	The existence problem for complete solutions of the differential equation (Qq)	217
26.4	The multiplicity of the complete solutions of the differential equation (Qq)	217

27 Structure of the set of complete solutions of the differential equation (Qq)	219
27.1 Preliminary	219
27.2 Relations between complete solutions of the differential equation (Qq)	220
27.3 The structure of the set of complete solutions of the differential equation (Qq) in the case of differential equations (q), (Q) of finite type m , $m \geq 2$	220
27.4 Canonical forms of the differential equation (q)	223
IV RECENT DEVELOPMENTS OF TRANSFORMATION THEORY	225
28 An abstract algebraic model for the transformation theory of Jacobian oscillatory differential equations	227
28.1 Structure of the group of second order regular matrices over the real number field	227
28.2 An abstract phase group	227
28.3 Linear vector spaces	229
28.4 Quasinorms	230
28.5 Kummer transformations of bases	231
28.6 Kummer transformations of elements	232
28.7 Abstract dispersions	232
28.8 Realization of the abstract model by means of analytic transformation theory	235
29 A survey of recent results in transformation theory	237
29.1 General dispersions	237
29.2 Dispersions of the 1st and 2nd kinds	237
29.3 Central dispersions	238
29.4 Generalizations	242
Bibliography	243
Supplementary Bibliography	248
Author and Subject Index	251
