Foreword

The Czechoslovak Academy of Sciences jointly with the International Mathematical Union organized from the 1st to the 8th of September 1961 in Prague a Symposium on General Topology and its relations to modern Analysis and Algebra. At this meeting a number of new results achieved in the field of Topology and its applications were presented. This book issued by the Publishing House of the Czechoslovak Academy of Sciences includes, among other materials, these papers in the form submitted by the authors, i. e. either as abstracts or in a more detailed version.

The Organizing Committee of the Symposium and the Editorial Committee of the Proceedings hope that the present publication will be profitable to all specialists in the field of Topology and its applications and also to all mathematicians interested in the present state of General Topology. At the same time, they wish to express their thanks to all authors having forwarded their papers and also to all those who helped in preparing these Proceedings of the Symposium.

Editorial Committee
