Contents

Preface 7

Marek Brandner, Stanislav Míka
On the approximation of the non-autonomous non-linear Riemann problem 9

Pavel Burda, Jaroslav Novotný, Bedřich Sousedík, Jakub Šístek
A priori and a posteriori error estimates for Navier-Stokes equations applied to incompressible flows 24

Josef Daněk
Using domain decomposition method for the stress-strain analysis of the artificial joint replacements 34

Michal Dostál
Numerical methods for MHD problems 41

Miloslav Feistauer, Vít Dolejší
Discontinuous Galerkin method for compressible flow and conservation laws 47

Cyril Fischer
Matrix-free formulation of the stochastic Newmark method 63

Milan Hokr, Vladimír Wasserbauer
Finite element method on 3D mesh with layer structure – application on flow and transport in porous media 70

Radek Honzátko, Jaromír Horáček, Karel Kozel
Numerical solution of inviscid incompressible flow in a channel with dynamical effects 76

Jan Chleboun, Petr Kocna
On cumulative ^{13}C breath tests: An effort to improve the accuracy of test results revealed a substantial uncertainty in input data 82

Pavol Chocholatý
Numerical treatment of initial value problems for delay differential systems 88

Radka Keslerová, Karel Kozel
Numerical solution of 2D and 3D incompressible laminar flows through a branching channel 94

Jiří Kobza
Contribution to construction of global cubic C^1 or C^2-spline on equidistant knotset 102

Roman Kohut
Solution of transient problems of thermoelasticity 108

Tomáš Kojecký, Petr Mayer
A modification of a class of IAD methods 116

Radek Kučera
Complexity and memory requirements of an algorithm for solving saddle-point linear systems with singular blocks 131

Václav Kučera
The discontinuous Galerkin method for low-Mach flows 136

Martin Lazar
Parallel implementation of an algorithm of the first-order projection method for solving viscous incompressible fluid flow 143

Vladimír Lukeš, Eduard Rohan, Robert Cimrman
Computational algorithm for homogenized coefficients of hyperelastic heterogeneous materials undergoing large deformations 149

Ladislav Lukšan, Jan Vlček
Software system for universal functional optimization 155

Ctirad Matonoha
Nonlinear optimization problem 162

Zuzana Morávková
The problem with bilateral contact and nonmonotone friction 169

Vratislava Mošová
Bézier curves and their applications 174

Jan Nejedlý, Roman Vaibar
Numerical simulation of the two-phase flow through the energetical equipment 180

Tomáš Neustupa
Analysis of incompressible flow through a cascade of profiles 186

Vladimír Prokop, Karel Kozel
Numerical solution of steady and unsteady bypass flow 191

Jana Přívratská, Oldřich Jirsák, R. Bharanitharan
Maxwell-Kelvin model for highloft materials 196

Jakub Slovan
Conservative method for a moving boundary problem with kinetic condition ... 200

Petr Sváček
On stabilized finite element method in problems of aeroelasticity 206

Jan Šípek, Jan Zítko
Alternating iterative scheme for the solution of block-structured systems 214

Pavel Šolín, Karel Segeth
Three ways of interpolation on finite elements 230

Karel Švadlenka
Discontinuous Galerkin method of lines for solving nonstationary singularly perturbed linear problems 242

Jiří Vala
Modelling of heat and moisture propagation in building structures 248

Tomáš Vejchodský
Fast and guaranteed a posteriori error estimator 257

Jan Vlček, Ladislav Lukšan
Variationally-derived limited-memory methods for unconstrained optimization . 273

Vítězslav Vít Vlček
How to use level set methods in computer tomography 279

Vít Vondrák, Zdeněk Dostál, Michael Damsgaard, John Rasmussen
Solution of muscle-bone contact problem in biomechanics 284

List of Participants 290
